EDUCATION

Engineering Degree in Computer Science — Université Mundiapolis 2024 – 2027 (expected)

Specialization: Data Science & Artificial Intelligence (5th year — final year)

Classes Préparatoires (CPGE) — CPGE Ibn Ghazi 2022 – 2024

Mathematics & Physics — Admitted via national competitive examination (CNC)

Baccalauréat — Newton International School 2021 – 2022

Physical Sciences track

SKILLS

- **Programming:** Python · Java · JavaScript · SQL · PHP
- **Databases & Backend:** Oracle Database · PostgreSQL · MySQL · Supabase · Relational Data Modelling · REST APIs
- **Software Engineering:** Object-Oriented Programming · Data Structures & Algorithms · Git/GitHub · Linux
- **Cloud & DevOps:** Docker · AWS Academy · Huawei Cloud · Deployment
- **AI & Machine Learning:** Scikit-learn · LLM Integration · RAG (incl. Oracle AI Vector Search) · Gemma/Ollama · OpenAI API
- **Automation & Integration:** n8n · Webhooks · Google APIs
- **Mobile & Web:** React Native WordPress/WooCommerce
- **Oracle Technologies:** Oracle Autonomous Database · Oracle Select AI · Oracle AI Vector Search · Oracle APEX · OCI Generative AI

CERTIFICATIONS

- **AWS Academy —** Cloud Foundations
- **Huawei Cloud —** Fundamentals
- **IBM —** RAG and Agentic AI
- **Meta —** Front-End Development (HTML, CSS, JavaScript)
- **AI Essentials —** Saïd Business School, University of Oxford

LANGUAGE

- **English:** Fluent
- **French:** Fluent
- **Arabic:** Native

SUMMARY

Final-year Computer Science Engineering student specializing in Data Science & AI at Université Mundiapolis, with experience delivering production-ready software for multiple clients and publishing a cross-platform application on the Google Play Store. Recently developed OraSight, an intelligent database copilot SaaS built with Oracle Autonomous Database, Select AI, and AI Vector Search. Proficient in Python, Java, SQL, PostgreSQL, REST APIs, Docker, Git, and Linux, with practical experience in intelligent automation and cloud deployment. Seeking a 6-month PFE internship starting in January/February 2027.

EXPERIENCE

Freelance Software Engineer | Independent | 2025 – Present

- Designed and shipped an end-to-end inventory, reservation and delivery platform for a retail client, with separate Admin and Driver workflows covering stock, orders, deliveries and collections.
- Modelled the relational schema and built the backend on PostgreSQL/Supabase, implementing authentication, file storage and real-time synchronisation across concurrent users.

AI Engineering Intern | Yool Education | Feb – Jul 2026

- Built an AI-powered HR email classification and routing system in Python with n8n, Docker and a self-hosted Gemma/Ollama model, replacing a manual triage process.
- Designed structured LLM outputs for intent classification, confidence scoring, urgency detection, SLA tracking and escalation to human agents.
- Integrated PDF parsing, Google APIs, audit logging and multichannel notifications into a containerised, reproducible deployment.

Software Engineering Intern | GoSoft | Jun – Aug 2025

- Developed an AI-powered WooCommerce plugin (PHP, JavaScript) that tracks user behaviour and dynamically personalises product rankings and recommendations.
- Integrated OpenAI via n8n and implemented GDPR-compliant consent, anonymisation, and data-retention mechanisms.

PROJECTS

SafeSpend | Personal Finance Application | Published on Google Play, 2025

- Designed, developed and published a cross-platform React Native application for budget tracking, expense categorisation and financial-goal management.
- Built the backend on PostgreSQL/Supabase with secure authentication and per-user data isolation.
- Managed the full product lifecycle, from UI/UX design to store submission and post-release updates.

OraSight | AI Database Copilot SaaS Powered by Oracle 23ai, Solo Project

- Independently designed and built OraSight, an AI-powered database copilot SaaS leveraging Oracle Autonomous Database, Select AI, AI Vector Search, and OCI Generative AI.
- Developed the application with a Spring Boot backend and an Angular frontend, ensuring a scalable and modular architecture.
- Owned the full product lifecycle solo, from technical design and deployment to user acquisition and SaaS monetization.
